Setting up your keyboard

Configuration de votre clavier • Einrichten Ihrer Tastatur • Uw toetsbord instellen • Impostazione della tastiera • Configuración del teclado • Configurar o seu teclado • Konfiguracja klawiatury • Настройка клавиатуры • إعداد لوحة المفاتيح • 키보드 설정

> Turn on your computer... > Connect the keyboard to one USB port... > Download software from... > Run the installer program... > Follow instructions for installation...

> Ligier o seu computador... > Ligar o teclado a uma porta USB... > Transfira o software a partir de... > Execute o programa de instalação... > Siga as instruções de instalação...

BIOS mode and polling rate

Mode BIOS et Taux d'interrogation • BIOS-Modus und Signalarate • Modalità BIOS e frequenza di polling • BIOS-modus en pollingsfrekwensie • Modo BIOS e tasa de consulta • Tryb BIOS i częstotliwość sondowania • Режим BIOS и частота опроса • Tryb BIOS i częstotliwość sondowania • Режим BIOS и частота опроса • Tryb BIOS i częstotliwość sondowania

BIOS mode is a special setting that allows your mechanical keyboard to work with legacy setups. In BIOS mode, many features like RGB lighting are disabled. The scroll lock LED flashing is to remind you that you are not in standard mode and should switch back to it once you do not need to be in your BIOS anymore. The 1, 2, 4, and 8 setting allow you to change your polling rate to 1ms, 2ms, 4ms or 8ms.

O modo BIOS é um duplo especial que permite que o teclado mecânico funcione com configurações legadas. No modo BIOS, muitas funcionalidades (como, por exemplo, o RGB) estão desativadas. O LED de Scroll Lock intermitente serve para lembrar que não está no modo padrão e deve voltar ao mesmo quando o indicador de Scroll Lock não estiver mais aceso. O modo BIOS é ativado pressionando o botão de modo BIOS (chave com o ícone de uma chave) e selecionando a taxa de amostragem desejada (1, 2, 4 ou 8 ms).
