Known Issues

- Due to enhancements made to iCUE, users using the CORSAIR RGB Memory Plugin for ASUS AURA SYNC will need to update it to the latest version – you can find this plugin under the subcategory “iCUE” at <https://www.corsair.com/downloads>

iCUE 5.21.107 Issues Resolved

Software Enhancements

- iCUE will now create a backup for profiles before an update. This allows users to roll back to a previous software version (if necessary) without any data deletion and will be done automatically during the installation process. Backup files can be found here:
 - Windows: C:\Users\\AppData\Roaming\Corsair\CUE Backup
 - macOS: /Users/<user name>/Library/Application Support/Corsair/CUE Backup
- Updated CPUID SDK to the latest version
- Resolved an issue that prevented “All” from selecting all devices when used with library lighting
- Resolved various issues that may cause a crash when clicking on an unavailable device
- ‘Set to Original Size’ in iCUE Murals will now be disabled if the device is already at its default size
- Resolved an issue that prevented ASUS ROG STRIX Z790-F from appearing as a device in iCUE
- Govee H6061 will now properly show as a device in the iCUE Murals tab
- Resolved an issue that shows a Govee device being active in iCUE Murals even though the device state is off

HID Product Enhancements

- SCIMITAR ELITE RGB Brightness slider is now fully fixed with only on and off values for the slider
- Resolved an issue with K100 RGB that prevented the Media Control Wheel from working properly in software mode
- Resolved an issue with K70 CORE series that prevented the Winlock key from being disabled if toggled under the Performance tab
- Resolved various issues with the Key Actuations tab related to text overlap and missing translations

DIY Product Enhancements

- Resolved an issue with Constructor screen effect that prevented values from updating properly in the text field after renaming the sensor
- Resolved various text errors with iCUE LINK TITAN series coolers
- The cooling preset will no longer change for iCUE LINK TITAN series coolers after updating the firmware for the LCD
- Resolved an issue that prevented dragging and dropping images for device reordering after a firmware update to the iCUE LINK Hub
- Resolved an issue that prevented iCUE LINK Fans from lighting all of their LEDs

iCUE 5.20.89 Issues Resolved

Software Enhancements

- Resolved an issue that caused the initial launch of macOS iCUE to be off-centered
- Resolved an issue with sensor logging being saved to a different directory than the one indicated in Settings
- Resolved various minor issues with Murals with zooming and scrolling
- Resolved some translation errors with Device Memory Mode notifications

HID Product Enhancements

- Resolved an issue with Mic Boost displaying “%” instead of “dB”
- Added a notification to alert the user when Macro recording for Device Memory Mode exceeds 256 events
- Resolved an issue with K70 MAX that would crash iCUE when the polling rate is changed while Macro Record is active

DIY Product Enhancements

- Improved the performance when changing fan speeds based on PWM curves for iCUE LINK devices
- Added additional customization options for the Constructor screen effect on LCD-based devices

iCUE 5.19.104 Issues Resolved

HID Product Enhancements

- Resolved an issue with importing EQ presets from previous iCUE versions
- Resolved an issue with the Brightness slider for Scimitar RGB

iCUE 5.19.101 Issues Resolved

Software Enhancements

- Resolved an issue that prevented Gigabyte motherboards from showing up properly
- Resolved an issue that caused a memory leak with Murals lighting effects
- Added H61B5 RGBIC LED Strip lights to expand Govee support
- Resolved an issue that prevented users from deleting custom videos added to Video Capture
- Resolved an issue that prevented Force Update for certain devices that required a USB cable to be attached prior to starting the process
- Resolved an issue with German localization that caused text overlaps
- Resolved an issue that prevented higher polling rates to be selected for K60 PRO TKL RGB
- Resolved an issue that caused a crash when users create a profile after changing the polling rate for K70 CORE RGB
- Resolved an issue that prevented Govee sub-functions such as Clear and Paste from working properly
- Warning messages for Govee support are now localized
- Reverting to the original size for Govee devices will no longer cause an image loss
- Resolved various Govee issues with Murals

HID Product Enhancements

- Updated SoundID to the latest SDK
- Resolved a rare issue that caused a crash when using pre-existing DPI Hardware profiles
- Devices with Power Saving Mode enabled will no longer show up in Murals due to this setting disabling lighting to conserve power
- ST100 and M700 products will no longer lose their lighting zone assignments during LT100 configuration

DIY Product Enhancements

- Added legacy product support for the iCUE LINK ADAPTER
- Improved the Lighting Setup Wizard for iCUE LINK products – users will now be able to stop the selected fan from spinning to easily identify the device for configuration
- iCUE LINK XC7 ELITE LCD will now properly show up under the iCUE LINK SYSTEM HUB list
- Resolved an issue that prevented toast notifications from appearing for LS100 Starter Kit
- Resolved an issue that prevented Time Warp from saving after clicking the “Discard” button
- Resolved an issue that prevented Device Memory Mode from saving changes after clicking on the “Revert Control” button in Murals for iCUE LINK devices

- Resolved an issue that caused cooling presets to automatically move to the top of the list after a search
- Made improvements to reduce CPU resource consumption when using the Constructor Effect
- Hydro X Cooling presets are now available in Device Memory Mode
- Various user interface improvements have been made for Aurora LED Lighting Strips
- Resolved an issue that removed custom presets for the iCUE LINK RX Fan series
- Resolved issues that caused graphical overlaps for LS100 in the Lighting Setup tab
- Dominator RGB lighting will no longer be disabled in Murals after restarting iCUE
- Resolved an issue that caused lighting effects for DRAM to stall when putting the PC to sleep

iCUE 5.18.106 Issues Resolved

Known Issues

- We have made significant progress with the Gigabyte motherboard detection and will have the updated plugin to share soon
- Due to enhancements made to iCUE, users using the CORSAIR RGB Memory Plugin for ASUS AURA SYNC will need to update to the latest version (v2.2) – you can find this plugin under the subcategory “iCUE” at <https://www.corsair.com/downloads>
- Some versions of SCIMITAR RGB may not display lighting correctly due to incorrect slider values for Brightness – for those users who are affected, a workaround can be done by moving the slider to the “33%” – this will re-enable the lighting for you while we fix this in the next version

Software Enhancements

- Flintlock has been added to the iCUE Game Integrations profile folder
- Resolved various crashes that occurred when recording a macro
- Resolved an issue that prevented multiple colors from being saved onto certain devices in Device Memory Mode
- Resolved an issue that prevented “Select App to Launch” from working properly
- Govee setup will now properly show the “No Connection” warning when no internet connection is found
- Resolved an issue that may cause the software to time out when clicking the Settings icon for Govee
- Resolved an issue that prevented the deletion of a Custom Video effect in Murals
- The Plugins tab now has an Update All button available

HID Product Enhancements

- Resolved an issue that prevented DPI from being saved to some mice in Device Memory Mode
- Resolved an issue that prevented Audio Visualizer from playing its lighting effect properly

- Resolved an issue with LT100 that causes user interface problems when using the setup wizard on a 2K monitor

DIY Product Enhancements

- User Profiles for the Performance Memory Manager can now be deleted
- Resolved an issue that prevented the display of the full name with GPU Temp #1 when used with the Constructor screen effect
- Resolved an issue that causes the values to disappear when right-clicking on the search bar
- The scroll bar will no longer be lost when switching between the Cooling tab and other device tabs
- Resolved an issue that causes the graph to overlap the temperature value in sensor widgets
- Sensor names for Dual Bar and Constructor will no longer be missing after creating a new profile
- Sensor dropdown will no longer be blank when creating a new preset LCD screen effect
- Resolved an issue with the Case Color dropdown for XC7 ELITE LCD
- Resolved various issues that caused flickering while using the Lighting Setup Wizard for iCUE LINK devices

iCUE 5.17.110 Issues Resolved

Known Issues

- We are aware of reports related to the Gigabyte Plugin not properly detecting motherboards in iCUE and we are investigating this issue with Gigabyte
- iCUE may not detect DDR5 modules after installation for some user. In some cases, reinstallation of iCUE may resolve the issue – we are researching the root cause of this issue to provide a permanent resolution

Software Enhancements

- We have resolved multiple issues that may cause iCUE to crash on startup. We apologize for the inconvenience and will determine how to prevent profile data loss in the future when updating iCUE

iCUE 5.17.104 Issues Resolved

Software Enhancements

- Resolved an issue that caused Cooling and Alert tabs to be missing on NVIDIA RTX devices
- Due to the changes implemented in iCUE's backend support, users will need to update their Stream Deck plugin – updates for the plugin will also resolve various issues including action assignments and iCUE LINK device detection
- Resolved an issue with Govee that prevented right-clicking to change the name in the Device Settings tab
- Removed aspect ratio selection for Murals to improve the Murals setup experience
- Resolved an issue that prevented any “Press Dial” features from triggering on press
- Resolved issues that caused the download progress bar to disappear while updating new modules
- Resolved an issue that may prevent notifications from appearing after clicking on an info button
- Deleting the Govee plugin will no longer cause issues with the Device Settings tab

DIY Product Enhancements

- We have expanded the customization of our LCD screens for Hydro Coolers by allowing our users to overlay sensor data over any custom background
- Resolved an issue with 5000T RGB that caused lighting effects selected on a 4-pin channel to also play on the 3-pin channel
- HydroX cooling presets are now available in Device Memory Mode
- Resolved an issue that prevented preset fan curves from saving in iCUE after a software restart
- Resolved an issue that prevented the “Set LCD Frame Rate” slider from appearing properly
- Arc lighting effect now properly plays on SP120 PRO and SP120 ELITE series fans
- Resolved an issue with all cooling devices that prevented drag and drop from the cooling library
- Resolved an issue that caused software-enabled lighting effects to appear under Device Memory Mode
- Users will no longer be able to accidentally quit iCUE during any Setup Wizard process
- Resolved an issue with COMMANDER CORE not importing and exporting profiles properly

HID Product Enhancements

- Assignment buttons will no longer be disabled when unplugging a separate HID device
- Resolved an issue that caused problems with key assignments after a firmware update
- iCUE will no longer crash after changing lift height in Device Memory Mode
- Resolved an issue that prevented K95 RGB PLATINUM from displaying indicators if the brightness was set to 0%
- Resolved an issue with switching DPI stages on wireless mice after completing a new pairing process
- Resolved an issue with K70 MAX when using tournament mode with Device Memory Mode
- Resolved an issue with VIRTUOXO XT that caused mic boom LED issues when leaving the connectivity range of the receiver

iCUE 5.16.75 Issues Resolved

Software Enhancements

- iCUE now officially supports the detection of Gigabyte motherboards for RGB lighting control. This plugin will support the latest chipsets from AMD and Intel as well as their respective last-generation chipsets. To enable this feature, go to Settings > Plugins, then click the install button to the right of 'Gigabyte Plugin'
- The following devices have been added for Govee Support:
 - H61C2, H61C3, HC165
- Resolved a rare issue that causes the 'Restart Now' and 'Retry' buttons to be inoperable
- Updated the background image for the "Monitor Screen" effect in iCUE Murals to improve usability
- Added additional "Don't show it again" checkboxes for notifications related to third-party applications
- Resolved various user interface issues when iCUE is in different languages
- Resolved an issue that prevented the clicking of 'Pairing Reset' when too long of a name was used for the device
- Updated the driver for SCUF ENVISION and ENVISION PRO that prevented the controller from working properly in certain XBOX games

HID Product Enhancements

- Resolved an issue with certain keyboard models that prevented the assignment of key bindings after a forced firmware update
- Resolved some Device Memory Mode issues with GLAIVE and GLAIVE PRO

DIY Product Enhancements

- Resolved an issue that showed a blank screen option for default LCD screens
- Resolved an issue that prevented the 'Shutdown PC' alert for systems with NVIDIA 3000 series GPUs
- Improved the performance of iCUE when there are 24 devices connected to the iCUE LINK HUB

iCUE 5.15.117 Issues Resolved

Software Enhancements

- Resolved an issue that prevented firmware updates from starting during the prompt for a USB cable to be connected
- Resolved an issue that prevents the border around the Macro Recording area from blinking during a macro recording session
- Voicemod SDK is updated to the latest version – however, "Instant Censor Beep" and "Mute for Me On/Off" are temporarily disabled until they are re-implemented in the SDK

- iCUE will no longer fully quit while there is an active window prompt
- Improved the design for progress bars and their associated buttons
- Modules can no longer be deleted for devices that are still connected to the system
- Resolved an issue that caused temperature units to be displayed in Fahrenheit instead of Celsius by default
- iCUE will no longer crash while switching profiles during a pointer hover on an icon in Key Assignments
- Profile names will no longer be allowed to exceed 255 characters
- Info panels in Device Memory Mode will no longer have a text cut-off
- Resolved some user interface issues that caused improper scaling in some of the device panels
- Resolved an issue that causes iCUE to hang during the saving process of a hardware profile
- The following devices have been added for Govee Support:
 1. H610A Light Strips
 2. H61E1 Light Strips
 3. H61D3 Light Strips
 4. H6065 Y Light Bars
 5. H6047 Light Bars

HID Product Enhancements

- Additional notifications were added when saving multiple hardware profiles to a device
- A notification has been added for devices that are out of space while saving a hardware profile
- Added some improvements to Device Memory Mode to help with discarding changes
- Improved the notification(s) shown in iCUE macOS for a headset's first detection in iCUE
- Pointer Speed and Enhance Pointer Precision have been removed for mice – users should enable/disable these features now through Windows Control Panel for pointer devices
- Resolved a rare issue that caused Lighting Layers and/or Key Assignments to disappear after changing DPI settings and saving the hardware profile

DIY Product Enhancements

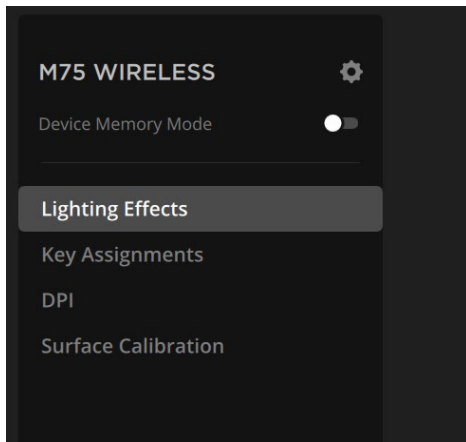

- Various issues were resolved with Device Memory Mode while saving images to LCD-supported devices
- Switching profiles will no longer cause a lighting effect to be stuck for iCUE LINK ecosystem devices
- Updated the HX1200i image to properly reflect the actual device

iCUE 5.14.78 Issues Resolved

Note: 5.13 was never released to public due to the large number of changes – it is expected to update from v5.12.97 directly to v5.14.78

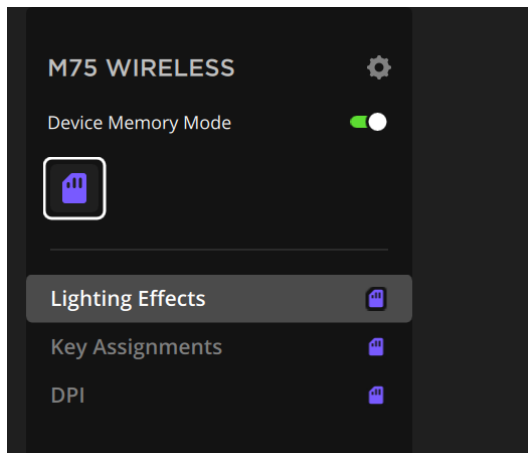

Software Enhancements

- One of the newest features (and changes in the user interface) is the implementation of Device Memory Mode

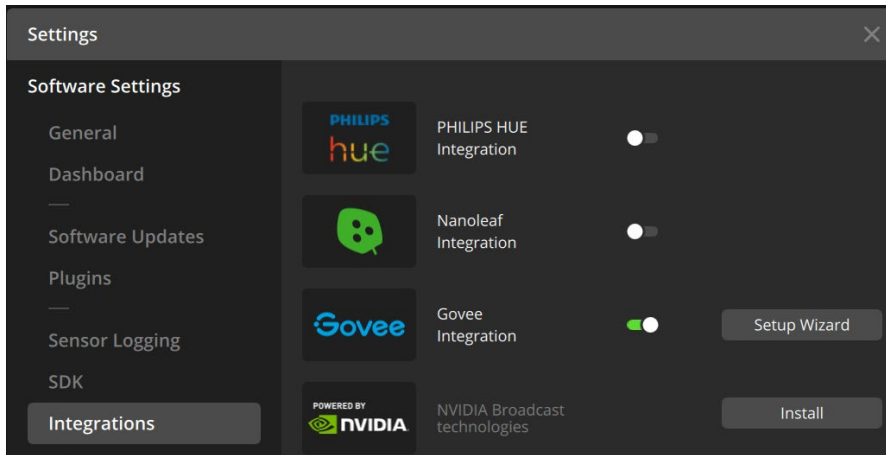

Device memory mode allows a product to be utilized in iCUE in the 'hardware state'. Previous iterations of iCUE require you to quit iCUE in order for a device to work in the hardware state. Hardware states for our devices allow for device behavior without a dependency on iCUE running in the background. Examples of hardware states include the color of lighting on your Fans and Coolers under 'Hardware Lighting' or Hardware Key Assignments for your mouse and keyboard.

When users enable Device Memory Mode, you will now be able to customize your device with the same hardware configurations without needing to quit iCUE to view your changes. It also allows users to configure their devices with an emphasis on making it easier to view and save your changes.

Device Memory Mode does not change what options (and their limitations) in the hardware state but this should allow users to manage their configurations in a clearer and more accessible method.

- iCUE now supports a limited number of Govee products. This feature is still in beta but allows users to detect and control Govee products in iCUE to synchronize with all iCUE-compatible devices. Features like per-LED lighting and iCUE murals are compatible with Govee devices in the iCUE ecosystem. This feature can be found in Settings > Integrations:

For proper setup of Govee devices with iCUE, please follow the Setup Wizard exactly as described. You will need to enable **LAN Control** in your Govee mobile application as a part of the setup process.

The following products are supported in our initial beta of Govee support:

RGBIC Pro Strip Lights

- H619A - 5m
- H619B - 7.5m
- H619C - 10m
- H619D – 27.5m
- H619E – 210m
- H619Z - 3m

RGBIC Neon Rope Lights

- H61A0 – 3m
- H61A1 – 2m
- H61A2 – 5m
- H61A3 – 4m
- H61A5 – 10m

RGBIC LED Neon Rope Lights for Desks

- H61C3 – 3m
- H61C5 – 5m
- H61C2 – 2m

Glide Hexagon Light Panels

- H6061

Additional Govee products will be supported in future iCUE releases

- Viewing profiles no longer are collapsable – they are now shown vertically for easier edits
- CPUID SDK is updated to the latest version
- HARPOON PRO will now properly show up as a device in Murals
- Resolved some issues with modules not properly uninstalling when deleted
- Resolved an issue with the NVIDIA BROADCAST Learn More hyperlink from opening correctly
- Toggling Lighting Layers will no longer cause the selection to auto select the last layer
- iCUE LINK Hydro Coolers in White will now show the proper image in Murals

- Profile names can no longer be blank
- Any iCUE application restart notifications will now show the device associated with the request

HID Product Enhancements

- iCUE will no longer crash when changing the DPI and unplugging the mouse afterwards
- Resolved various issues with headset detection and operation with iCUE macOS
- Dragging and dropping DPI Presets from the DPI List will no longer cause iCUE to quite unexpectedly
- The debounce customization in Settings for certain iCUE keyboards will now show the correct value after configuration
- Resolved an issue that may cause errors to iCUE when deleting an onboard profile on SCIMITAR/ELITE RGB
- Adding a widget to iCUE NEXUS will no longer cause the opacity feature to disappear from background options
- Resolved an issue that prevented G-keys and Lighting Link from working properly for iCUE NEXUS

DIY Product Enhancements

- Triggered Alerts will now properly show in the applicable device tiles under the Home Page
- VENGEANCE DDR4 modules detected in iCUE will no longer cause the DDR5 version of the module to be downloaded together
- Users will now be able to use the same name on different sensors
- iCUE LINK Devices will now properly illuminate during the setup wizard
- Users will now be able to drag and drop devices during setup after a firmware update
- Resolved a text issue with LCD screen rotation in different languages
- Resolved an issue that prevented a screen from being deleted after adding it as a custom image/gif
- QX fans now have a Change Case Color so users can select the white version for the user interface
- Resolved various issues when configuring the scaling of custom images for LCD screens
- Resolved an issue that caused iCUE to quit unexpectedly after a successful firmware update to the Voyager A1600 Touch Bar and renaming of the screen

iCUE 5.12.97 Issues Resolved

Software Enhancements

- Resolved an issue that caused iCUE to unexpectedly quit when importing a profile on a system with a NVIDIA Founder's Card GPU installed
- Battery Status sensor widgets on the Dashboard will now properly show a graph in the background
- Certain widgets will no longer be missing their context menus when added to the Dashboard
- Lighting Effects will no longer be duplicated when dragging and dropping layers in the list
- Resolved various issues with naming in Murals
- HARPOON PRO will now properly show up as a device in Murals

HID Product Enhancements

- Resolved an issue that causes KATAR PRO WIRELESS to stop responding if the polling rate is changed to 2000 Hz
- Resolved an issue that prevented Imitate Holding Key from working properly with Hardware Key Assignments
- Resolved various issues that may cause iCUE to unexpectedly quit when changing polling rates across various devices
- Resolved various issues that caused keypress combinations from working properly with Japanese layouts on certain keyboards
- The Brightness Control icon will no longer be missing for the K100 Control Wheel
- Resolved an issue that caused K70 CORE RGB to show up as a CRP_DISABLED device after a firmware update
- Resolved the following issues with iCUE NEXUS:
 - Background image will now display properly when using the 640x48 px window size
 - Image rescaling logic was improved
 - Profile switching issues were fixed so that all profiles will properly appear on the rotation list
 - Changing Lighting Link will no longer cause the name of the effect to disappear
 - Renaming an EQ preset will properly update the device screen

DIY Product Enhancements

- GIPHY support has been added to all LCD devices – users can now browse, download, and add animated GIFs to their devices. To find this feature select 'Images/GIF' then click the 'GIPHY' tab:

- Resolved an issue that caused a delay in DDR5 detection when creating a new user profile
- Resolved an issue with VOYAGER Gaming Laptops battery widgets not updating their status properly after the charger is removed – the widget for this sensor can also now be properly added to the Home Screen
- The brightness between the keyboard and the touch bar for VOYAGER Gaming Laptops will now be properly adjusted together when using the hotkey
- An additional prompt has been added to the Performance Manager tab for DDR5
- Resolved various issues with the customization of Alerts
- Resolved a display issue when using custom fan curve names when a QX fan is connected

iCUE 5.11.96 Issues Resolved

Software Enhancements

- Resolved a critical issue that enables ‘Enhance Pointer Precision’ in Pointer options under WinOS Mouse Properties – iCUE will also no longer re-enable this option on application restart

iCUE 5.11.95 Issues Resolved

Software Enhancements

- iCUE will no longer crash when switching presets in Murals
- Improved tooltips for better consistency and placement in iCUE
- When Lighting Layers are toggled, the last layer in the list will no longer be auto-selected

- Naming a Murals effect with a long name will no longer cause the Go To Murals button to disappear
- Resolved an issue that causes the device image to increase in size briefly when trying to downsize
- Hovering over shortened text on a sensor in Dashboard will now properly show the full text as a tooltip
- Resolved an issue that caused graphs to still appear for sensor widgets in Dashboard even after hiding them
- Improved the responsiveness of the Color Wheel

HID Product Enhancements

- Resolved an issue with French language that affected Macro – Copy Event and Macro – Delete Event
- Copying “Switching Profile” as an assignment will now be possible even without a key being assigned
- Cancelling the firmware update on Void RGB ELITE Wireless will no longer cause it to disappear from the device list
- Resolved various lighting effects issues with NIGHTSABRE, DARKSTAR, and K70 PRO Wireless
- Resolved an issue with NEXUS battery status widgets that prevented certain devices from reporting their battery levels
- A background image will now properly be displayed when a screen on NEXUS is imported

DIY Product Enhancements

- Resolved an issue that affected Time Warp lighting after a device’s firmware update is completed
- Resolved an issue that affected Fan Curves with Fixed % and Fixed RPM when used with Fahrenheit units
- Resolved an issue that caused profile 4 in Performance Manager for DDR5 to not appear unless iCUE is restarted
- VOYAGER battery widget will now properly report its battery level
- Rotary Stack and Spiral Rainbow will now play properly on the Hydro X XG7 RGB
- Resolved an issue that caused the iCUE LINK HUB to display an improper text string when the language is changed
- Resolved an issue with the 1000D in Murals that prevented some options from appearing during configuration
- LT100 tower adjustment now works properly when changing the device tower arrangement

iCUE 5.10.82 Issues Resolved

Software Enhancements

- Resolved an issue that prevented firmware updates for some devices on iCUE macOS
- Implemented some minor design enhancements related to fonts and the use of more toggles where appropriate
- Exported system logs will now contain information for installed modules and packages
- Resolved some text overruns for various languages in iCUE

- iCUE will now continue downloading new modules after a lost internet connection is resolved
- 'Hide Graph' now works for Sensor widgets
- Zoom In/Out now works properly for Murals
- 'Set to Original Size' feature for Murals will no longer result in rotation buttons showing the wrong icon
- Resolved an issue that may cause iCUE to lose connection with the Philips Hue hub
- Resolved various crashes reported by our end users – thank you for continuing to submit your crash logs for us to review

DIY Product Enhancements

- Resolved an issue that prevented DRAM to appear as a configurable device after an iCUE installation
- Improved notifications related to iCUE LINK System Hub and its over-current protection warning
- Implemented Profile import and export enhancements for all iCUE LINK devices to improve the experience of sharing lighting customization
- Resolved some calculation issues that resulted in incorrect values related to the DDR5 Profile Manager
- The framerate slider for XD5 Elite is now available in Device Settings

HID Product Enhancements

- Improved the firmware update process for K70 CORE that resulted in an unresponsive state on rare occasions
- Changing polling rates for K70 CORE will no longer cause iCUE to crash
- Launch Application key assignment will now properly work when assigned to a key on K100 RGB
- Resolved various issues with K70 MAX related to actuation presets and secondary assignments
- iCUE will no longer crash when waking up from sleep if a VIRTUOSO XT connected in wireless mode
- Resolved an issue for iCUE NEXUS that prevented G-Key assignments from triggering
- Resolved an issue for iCUE NEXUS that prevented the background images for widgets from being applied properly

iCUE 5.9.105 Issues Resolved

Software Enhancements

- Resolved an issue that causes iCUE to crash on startup
- Resolved an issue with LS100 that causes iCUE to crash on device disconnect
- Resolved a conflict with iCUE with devices missing a manufacturer label in the USB string
- Improved the usability of vertical sliders when resizing the window
- Moving the window during an iCUE installation across monitor screens will no longer result in a black bar
- Resolved an issue with Launch Application that opens a folder instead of the application

- Users can now remove device modules even when iCUE is not connected to the internet
- Resolved an issue that causes other actions to be highlighted when assigning a modifier key
- Users will no longer be able to remove a module while it is updating
- Resolved various Dashboard bugs with adding and removing sensor widgets
- Nanoleaf in Canvas will no longer cause iCUE to crash after pairing multiple devices

DIY Product Enhancements

- The LED ring will now properly rotate with the LCD on all LCD based coolers
- Custom Fan Curves now properly work when used with various CPUID sensors
- Removing a Custom Cooling Fan Curve will no longer cause all fans to revert to the Balanced preset
- Hiding the graph for DIY devices will now properly work after an iCUE restart
- Resolved a conflict with data shown in Alerts when users switch between Fahrenheit and Celcius
- Voyager A1600 Cooler will no longer be shown as a Xeneon monitor
- Device Settings will no longer be missing features after a firmware update on H100i ELITE LCD coolers
- Custom Screen Preview will no longer show the wrongimage with LINK LCD-based devices
- Resolved various minor bugs with the LCD screen and image customization
- DDR4 modules will no longer appear together with DDR5 modules (and vice versa)
- iCUE will no longer show Vengeance PRO DRAM as a name if it has been replaced with DOMINATOR DRAM

HID Product Enhancements

- Updated the hyperlink in the notification for DOLBY ATMOS
- The front LED and light edge LED on GLAIVE mice will no longer play incorrectly in iCUE
- M65 RGB PRO now properly saves hardware lighting to the device
- Resolved an issue with text overrun with various languages that prevented users from saving a hW profile
- Resolved an issue that prevented “Disable Key if Lock Button is On” from function
- The lighting playback is now properly synced between iCUE and the device for the Control Wheel tab
- Resolving an issue with NEXUS when using Lighting Link
- ENVISION PRO will no longer show battery status as Unknown at near empty battery levels
- Resolved an issue with audio devices crashing iCUE when switching from Playstation to Multipoint Mode

iCUE 5.8.130 Issues Resolved

Software Enhancements

- Software and Games tab in iCUE settings have been combined into a new tab called SDK for better organization

- CPUID has been updated to the latest SDK and further optimized for better performance on the system when iCUE is open
- iCUE Home Sensors and Dashboard widgets will no longer randomly reset to default
- Resolved a rare issue that causes the name of a lighting effect to appear incorrectly

HID Product Enhancements

- Implemented Rapid Trigger customization for K70 MAX keyboards. Users will now be able to configure Rapid Trigger for any key or groups of keys. Please ensure you have also updated to the latest firmware on your device to enable this feature
- Media keys assigned with Volume Up and/or Volume Down will now repeat on a long key press
- K70 MAX will no longer cause a crash in iCUE when switching a profile through a secondary actuation
- NEXUS will no longer display a black screen when replugging a Slipstream Receiver

DIY Product Enhancements

- Resolved an issue with Commander Pro that prevented Custom Cooling presets from working properly
- All LCD based devices now support screen rotation – you can find this option under Device Settings. For a future update, the LED ring will also match the orientation of the LCD screen
- Improved the accuracy of wattage sensors for iCUE Digital PSUs
- Default fan curves for QX fans have been improved
- Time Warp lighting effect will no longer be affected after a firmware update
- Resolved various issues related to Alerts for Cooling Devices
- Improved the playback of certain lighting effects for the iCUE LINK GPU adapter
- Resolved an issue that caused cooling presets to disappear after updating the firmware on the Commander Pro

iCUE 5.7.106 Issues Resolved

Software Enhancements

- Additional products have been added for iCUE SDK support
- CPUID SDK is now directly integrated into iCUE instead of previously relying on a service. Users should see overall system performance improvements with device polling and dashboard metrics. We are aware of an issue that some AMD GPUs may not report their temperature and will resolve this in iCUE v5.8 with an updated CPUID SDK
- Updated some of the fonts in iCUE for better readability, especially for East Asian typefaces
- iCUE will now properly notify users to restart after re-installing NVIDIA plugins
- Resolved an issue with iCUE not properly resizing windows automatically based on scaling
- Resolved an issue that prevented users from rotating devices in Murals after resizing

DIY Product Enhancements

- Time Warp Lighting Effect will no longer conflict with third-party lighting integrations

iCUE 5.6.98 Issues Resolved

DIY Product Enhancements

- Removed the notification message related to DDR4 that was present in the previous version. Please feel free to contact our support team if you have any questions or concerns

iCUE 5.6.97 Issues Resolved

Software Enhancements

- Resolved an issue with some text not being translated in the Installer
- Resolved an issue that prevented the installation process from starting if a different language is selected
- Resolved an issue that prevented some modules from being deleted
- Icons will no longer be skewed after deleting a profile with a custom image
- iCUE will no longer crash upon waking up from sleep if “Monitor Screen” is selected as a Mural
- Removing favorited Murals will no longer cause the device layout to reset to default
- iCUE for macOS will now properly uninstall
- Profile icon images will no longer be blurred in Murals
- Additional GPU sensors are now available for NVIDIA and AMD graphics cards
- SoundID plugin has been updated

HID Product Enhancements

- iCUE NEXUS and VOYAGER laptop users will now be able to assign different colors to both the text and the graph for their sensors

DIY Product Enhancements

- Users with CORSAIR DDR4 memory that has corrupted SPD values from a previous iCUE bug will be notified in the software to proceed with an RMA exchange to resolve the issue
- iCUE LINK Hydro Coolers predefined curve presets for custom cooling now matches the actual curve data for the Quiet/Balance/Extreme presets
- Lighting Setup and Device Settings are now available as tabs for the iCUE LINK System Hub
- iCUE will no longer crash if “Add to Home” option is used for Commander Core XT sensors in the Dashboard

iCUE 5.5.134 Issues Resolved

Software Enhancements

- Updated NVIDIA Broadcast SDK – NVIDIA 4000 series of GPUs are now properly supported
- Resolved an issue with iCUE firmware update that causes the window to display no information after a successful update

HID Product Enhancements

- SCIMITAR RGB ELITE will no longer be missing the Profile Switch button for re-assignment
- Renamed widgets for NEXUS will no longer cause a graphical overlap

DIY Product Enhancements

- The Cooling Preset curves (Quiet/Balanced/Extreme) for all iCUE LINK AIO Coolers will now use the coolant sensor instead of the CPU package sensor
- Resolved an issue with Time Warp that prevented the enabling of Hardware Mode
- Resolved a rare issue with QX RGB fans that may prevent the customization window from appearing
- Improved the lighting effects playback for QX RGB fans
- Resolved issues with “All” in the Quick Lighting Zone for QX RGB fans
- Gaming Mode has been removed from VOYAGER systems as a preset cooling mode

iCUE 5.4.98 Issues Resolved

Software Enhancements

- A new version of the iCUE Plugin for Stream Deck is now available. Users will now be able to assign units of measurement (e.g., Celsius/Fahrenheit) to sensors
- Additional Context Notifications have been added to improve the user experience
- iCUE macOS® now supports direct upgrades from iCUE 4.33 to the latest version of iCUE 5.x
- iCUE macOS® now supports our crash reporting service
- Resolved an issue that allowed users to accidentally delete iCUE modules

HID Product Enhancements

- iCUE NEXUS and VOYAGER laptop users will now be able to assign different colors to both the text and the graph for their sensors
- Resolved an issue with NEXUS that would result in a black screen if users deleted and re-applied the same image
- The selected color icon for NEXUS screens will no longer always show as black

DIY Product Enhancements

- Reenabled the XMP Performance Manager for DDR5 products that support it
- The iCUE LINK System Hub will no longer cause the device settings window to display nothing when the firmware update process begins

- Resolved an issue with WMI that would cause Windows to not detect any of our RGB Memory properly (thus affecting iCUE detection)

iCUE 5.3.102 Issues Resolved

Software Enhancements

- A new version of the iCUE plugin is now available in the Stream Deck store. The iCUE plugin now features CORSAIR audio features such as EQ change, microphone on/off toggle, surround sound toggle, battery widgets for wireless devices, and more!

- We have resolved an issue that caused some devices to no longer be detected after updating to Windows® 11 version 22H2
- Murals Audio Lighting Effect will no longer cause iCUE to crash when the system is awakened from Sleep/Hibernate

HID Product Enhancements

- SoundID is now supported in iCUE for macOS®
- Resolved an issue with popping noises related to aggressive EQ settings in iCUE for macOS®
- Support has been added for iCUE LINK devices

DIY Product Enhancements

- The Clock Screen Effect for Elite LCD Coolers will no longer cause iCUE to crash

iCUE 5.2.128 Issues Resolved

Software Enhancements

- The iCUE plugin for Stream Deck has been vastly improved. Users can now populate their Stream Deck keys to display any available sensor from the Dashboard. In addition, users will be able to toggle different cooling settings for their DIY devices, change the active Mural effect with a single button, and more
- iCUE-compatible motherboards and GPUs are now supported in Murals
- Users will now be able to choose different layout sizes (4:3 or 16:9) for Murals
- CPUID SDK has been updated
- Improved the stepping (1%) and the zoom range (1-200%) for the media editor when customizing an image for iCUE NEXUS, Profile Icons, Profile Backgrounds, Screen Settings (Elite LCD), and custom images/videos for Murals
- Long device names in Murals will no longer overlap the Hide Device button
- Unplugging a device will no longer reset the Murals layout(s)
- iCUE longer will no longer prevent an installation if the Portuguese language is selected

HID Product Enhancements

- Unplugging and re-connecting a Dark Core RGB/SE mouse will no longer result in a duplication of Lighting Effects
- Dark Core RGB/SE now properly shows the correct alternating colors for the Water Lighting Effect
- Harpoon RGB will now properly wake a system from sleep
- Resolved a detection issue associated with the HS80 Receiver

iCUE 5.1.1114 Issues Resolved

DIY Product Enhancements

- We were able to identify an issue with the XMP Profile Manager affecting users with CORSAIR DDR4 memory in iCUE. As a result, we have temporarily removed the XMP Profile Manager feature and will re-implement it once we are able to provide a fix. Users on existing versions of 5.0 and 5.1 should upgrade to this version of iCUE immediately.

We apologize for any inconvenience as a result of this problem, and any users that have issues with iCUE and their DRAM should reach out to our tech support team at <https://help.corsair.com/hc/en-us/requests/new> for assistance.

iCUE 5.1.1113 Issues Resolved

Software Enhancements

- Resolved issues with missing iconography in Lighting Effects
- Various improvements have been made to module updates
- Improvements have been made to Murals to support resetting device sizes back to default and allowing users to simultaneously resize across different devices
- Color accuracy has been improved for the Monitor Screen effect in Murals on HDR-enabled monitors
